Here is the information from the pesticide registration database for this methyl bromide fumigant produced by Soil Chemicals Corporation, dba Cardinal Professional Products. The document that starts with the numbers contains the latest label instructions for this methyl bromide quarantine fumigant - it starts four pages in. It also includes information on type of items that may incur corrosive damage from contact with the fumigant (p. 3) that may be useful in evaluating personal effects or other that were present during fumigation. This information on corrosive effects was not included in the product information for the Meth-O-Gas Q product (which is also a methyl bromide fumigant) produced by Great Lakes Chemical

Hi John... do you have access to a Pest. Regis data base? If you do can you check out this # for me? Thanks.

Methyl Quarantine Fumigant

EPA Registration No. **8536-29-87994**
